

INCREASE WHEAT YIELDS BY ENHANCING TOP DRESS NITROGEN APPLICATIONS

Hydra-Hume® A is a fertilizer adjuvant that improves the performance of liquid fertilizers. This proprietary, organic based formulation is designed to make your fertilizer more effective. It provides greater fertilizer uptake and reduces loss for increased efficiency and returns.

Hydra-Hume A helps prevent nutrient tie-up by improving fertilizer availability. When added to top dress nitrogen applications, Hydra-Hume A consistently produces an increase in wheat yields compared to untreated acres.

Hydra-Hume A is available in dry granular or liquid formulations. Contact your local Helena representative or authorized dealer for more information on how you can increase fertilizer efficiency with Hydra-Hume A.

Hydra-Hume A

PRODUCT HIGHLIGHTS

Provides greater fertilizer uptake & reduces loss for increased efficiency & improved returns by:

- Reducing the potential for tie-up
- Increasing the availability of fertilizer to the crop

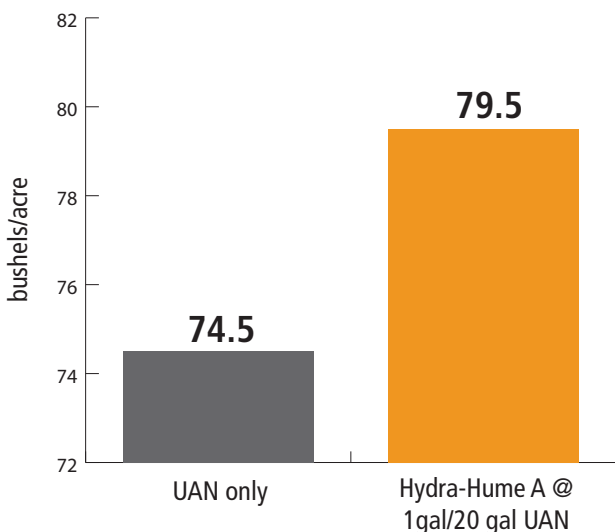

Untreated

Treated

Hydra-Hume A Advantage in Top Dress Applications Average of Seven Replicated Trials Over Three Years
